

## **List of common problems that could affect the publication**

1. Solve all requests raised by reviewers of the Journal ANNALS UCV – EE Series 2026;
2. Too long presentation of some well known elements in a lecture / seminar style (formulas and text);
3. Failure to provide the personal contribution and the lack of a concluding section;
4. The lack of any theoretical / analytical support / (mathematical model) associated with the solutions presented;
5. Presentation of simulation models, but without results and interpretations;
6. Presentation of the wiring / electronics without evidence and arguments for the practical operation (incomplete solution);
7. Some insignificant technological / manufacturing elements (as printed circuit board - pcb)
8. Too many lines of code in a program or presentation in an unstructured form;
9. Hardware solutions without minimal elements (recorded signals, associated software support) that could prove the operation.
10. Title does not use the first capitalized letter for the main words;
11. Summary does not contain at least 200 words;
12. The summary should not contain bibliographic citations and some specification of charts or tables .
13. Equations edited faulty or scanned;
14. Charts / diagrams not readable;
15. Pages with empty spaces and columns unbalanced;
16. Low number (below 10) of bibliographic references with too many auto-citations (more than 3-4) and too many addresses of web pages;
17. The paragraph formatting is not uniform and do not meet the requirements of the model;
18. In the abstract does not show clearly the contributions of the author/authors.
