

Transport Durabil

Sustainable Transport

Obiectiv principal

Cunoasterea problemelor legate de transportul durabil. Sunt prezentate principalele concepte de transport, tipuri de vehicule, control și sisteme de siguranță a traficului precum și impactul acestora asupra mediului în contextul dezvoltării durabile

Course Objective

Knowing the issues of sustainable transport. The main concepts of transport, types of vehicles, control and traffic safety systems, as well as their impact on the environment in the context of sustainable development

Curs

2 ore/săptămână, total 28 ore

- Concepte si directii de actiune ale transportului durabil. Locul transporturilor in cadrul dezvoltării durabile. Impactul sistemelor de transport asupra mediului. Probleme specifice de mediu in functionarea sistemelor de transport
- Ecuatia miscarii utile. Diagramele de mers. Circulația stradală și feroviară
- Sisteme de transport electric conventionale.
- Sisteme de transport electric neconventionale. Sisteme de transport hibride. Automobile hibride. Autobuze hibride.
- Surse noi de stocare a energiei electrice. Strategii de control intelligent aplicate pe vehiculele hibride.
- Siguranta traficului. Vehicule inteligente. Sisteme expert pentru ghidarea vehiculelor. Sisteme moderne de semnalizare.
- Managementul transportului durabil. Transportul intermodal

Course

2 hours weekly, 28 hours total

- Concepts and directions of sustainable transport. The place of transport within sustainable development. The impact of transport systems on the environment. Specific environmental problems in the operation of transport systems
- Equation of vehicle motion. Speed diagrams. Road and rail traffic
- Conventional electric transport systems.
- Unconventional electric transport systems. Hybrid transport systems. Hybrid cars. Hybrid buses.
- New sources of electricity storage. Intelligent control strategies applied to hybrid vehicles.
- Safety of traffic. Smart vehicles. Expert guidance systems for vehicles. Modern signaling systems.
- Sustainable transport management. Intermodal transport

Laborator

2 ore/săptămână, total 28 ore

- Prezentarea laboratorului. Efectuarea instructajului NTS si PSI.
- Studiul partiilor mecanice a vehiculelor de transport
- Studiul echipamentului FERELEC
- Trasarea diagramele de mers ale vehiculelor.
- Optimizarea miscarii utile a vehiculelor
- Analiza exergetica a regimurilor de demaraj ale vehiculelor
- Studiul metodelor moderne de reglare a vitezei vehiculelor
- Calculul consumurilor de energie ale vehiculelor electrice.
- Franarea vehiculelor. Impactul asupra mediului.
- Franarea electrica a vehiculelor.
- Studiul functiilor de monitorizare si diagnoza a vehiculului
- Controlul traficului cu ajutorul retelelor Petri.
- Studiul sistemelor de ticketing automat si siguranta traficului (ETCS si ERTMS)
- Evaluarea finala a activitatii de laborator.

Laboratory

2 hours weekly, 28 hours total

- Presentation of the laboratory and the safety instruction.
- Study of the mechanical parts of electric vehicles
- Study of FERELEC equipment
- Design of the vehicle's speed diagrams.
- Optimize the vehicles motion.
- Exergy analysis of vehicle start-up regimes
- Study of modern vehicle speed control methods
- Calculation of energy consumption of electric vehicles.
- Vehicle braking. Impact on the environment.
- Electric vehicle braking.
- Study of vehicle monitoring and diagnosis functions
- Traffic control with Petri networks.
- Automatic ticketing and traffic safety (ETCS and ERTMS)
- Final evaluation of laboratory activity.
